Take Manual Therapy to the Next Level...

Cryoderm Myofascial Warming Ointment & Cream were developed by Leading Healthcare Providers to enhance all manual therapies. Their advanced formulations with GRR™ (Glide to Resistance Ratio) Technology provides the correct amount of glide to resistance ratio for Myofascial Release, Deep Transverse Friction, Assisted ROM, Stripping, Breaking up Adhesions. Compatible with all modalities where tools made of Stainless Steel or other materials are being used for the purpose of Specific tissue mobilization, Stretching connective tissue and muscle fibers, Separating and breaking down scar tissues collagen cross-links, as well as all other Therapeutic hands on modalities.

For Use By Manual Therapy Professionals Only

Purchase CryoDerm® Myofascial Ointment & Cream From

Therapeutic Myofascial Warming Ointment & Cream With GRR™ (Glide to Resistance Ratio™) Technology
Enhances all Manual Therapies.
Contains Essential Oils and Botanical Extracts

+ For Professional Use Only
All CRYODERM Myofascial products contain GRR™ Technology
Allowing the Ointment and Cream to have the same Glide to Resistance Ratio. The essential properties for Therapeutic Ointments and Creams require them to have enough glide for movement while maintaining the correct resistance so that the deeper tissue may be affected. This breakthrough technology allows CRYODERM to titrate their formulations to exacting standards for the Manual Therapy Professional.

Additionally all CRYODERM Myofascial formulations contain
A proprietary blend of *ARNICA: an Anti-Bruising agent that also aids in reducing inflammation, *BOSWELLIA: A natural COX-2 Enzyme Inhibitor reduces Inflammation and has anti-arthritic actions in acute and chronic models and *MSM: A naturally occurring essential nutrient found in healthy tissue and joints which regulates the sodium potassium pumps in the cell thereby increasing permeability. MSM also has anti-inflammatory and local analgesia properties. This proprietary blend helps set the body up to heal more rapidly and return to homeostasis, restoring proper function and ROM

What is GRR™ Technology?
GRR Technology is a method of calibrating the glide to resistance ratio of Creams and Ointments to exacting standards. In order to do this our formulators had to first create a Glide to Resistance Ratio scale and then a way to measure these forces. Working closely with leading Healthcare providers and monitoring the effects of Myofascial products on the body they were able to establish what the perfect number should be on that scale. The ratio of lbs per square inch being exerted Vertically, Horizontally and Centripetally had to all be taken into account as well as Fluid resistance or drag. The result of this research is the perfect balance of Glide to Resistance Ratio making CRYODERM Myofascial Ointment and Cream, the # 1 choice for Manual Therapy professionals.

m\_magnitude of centripetal force \quad \text{Viscous Resistance} \quad F_d = -bv

F = ma_c = \frac{m v^2}{r} \quad \text{quadratic drag} \quad F_D = \frac{1}{2} \rho v^2 C_D A

Myofascial Warming Ointment & Cream
Are An Excellent Adjunct To:
• Chiropractic Care
• Massage Therapy
• Physical Therapy
• Podiatric Care
• Occupational Therapy
• Physiatry
• Personal Training

• Use Myofascial Ointment or Cream when treating with tools made from Stainless Steel or other materials for the purpose of Specific tissue mobilization, Stretching connective tissue and muscle fibres, Separating and breaking down scar tissues collagen cross-links.
• And all other occasions where Manual therapies are being applied for Soft Tissue Injuries, Joint Pain, Neurological Pain and or the restoration of proper function and ROM.
